

# Third Annual Bull Sale

Monday, April 19th • 1:00pm • Loma Livestock, Loma, Colorado

- All Bulls Bred, Born and Raised over 6,400 feet and summered over 9,000 feet!
  - All Bulls Fertility Tested
  - All Bulls Guaranteed
- All Bulls Have Been PAP Tested
- Dan Reardon - 970-729-2571

Welcome to the 2021 Rocking R Red Angus Bull Sale. We appreciate your interest in our Registered Red Angus cattle operation. After selling registered bulls by private treaty for many years, 2021 marks the 3rd year that we have sold our bulls by live auction. We are excited about this year's sale.

I would like to highlight some serious improvements and changes we have made to our operation. We have always DNA tested our calves in order to prove parentage. Beginning in 2019, we set the bar higher in regards to our DNA testing. We introduced Genomic DNA testing. This dramatically increases the accuracy of the EPD's for our animals. All bulls in this sale are Genomic Tested. While this adds significant cost to our testing, the improved accuracy of the EPD's is extremely valuable for our operation and our customers as well.

We know that many of our customers take our bulls to higher elevation. Dependable, PAP Tested Red Angus cattle are hard to find. Therefore, we have placed an enormous emphasis on PAP testing and high altitude performance throughout our entire herd. Dr. Tim Holt, of Colorado State University (CSU), has PAP Tested our cattle for many years. We have made excellent progress following his recommendations.

We PAP test every female in our herd and we PAP test every yearling bull we offer as breeding stock. We only use PAP tested bulls for our AI program and only use PAP tested herd bulls for natural service. Replacement heifers are culled based on their PAP. With our strict commitment to improving high altitude performance, our PAP scores have dramatically improved every year. Our cattle run at over 9100 feet from April through November. Our cattle winter and calve at 6400 feet. We understand what it means for cattle to perform at high elevation.

We believe in the quality of our cattle. We semen collect a few of the best yearling bulls every year prior to our bull sale and we use them in our AI program. So, the bulls you are buying are some of the same bulls that are breeding our females this year. We believe in our genetics and trust the quality of animals we sell to our customers.

In closing, I am grateful for everyone involved in our operation. I have an amazing family that supports me every step of the way. They know what it takes to run a ranch and they show me nothing but support. My children, Nolan and Lyla, have matured into great hands on the ranch and help with all cattle related work. My wife, Katie, helps in so many different ways and has taken over the photography and marketing for the ranch. Tate Fellhauer is in charge of the daily ranch duties and has an incredible sense of commitment to the herd. We also thank friends and family for all of your help branding, gathering, hauling, etc. It takes a great team to run a ranch!

Please feel free to reach out to me prior to the sale or on sale day for any questions regarding the bulls and our cattle operation. Personal viewing of our stock and a ranch tour is available any time. I enjoy discussing genetics and cattle. I would love to learn how to help you with the needs of your herd.

Sincerely,

**Dan Reardon**  
**Rocking R Red Angus**  
**Dan's Cell: 970-729-2571**

# \$Profit™ - The Next Generation of Cattle Evaluation

## Why \$Profit helps:

Today, ranchers have too much data to study. With over 20 traits, buying the best bull has become really confusing. We have actual weights, adjusted weights, ratios, and then a host of EPD's. Every bull is good on some traits and weak on others. The challenge is figuring out how each of those traits is going to impact your bottom line. We wish we truly knew which bull would make the most money from birth to slaughter, but most of the time, we end up guessing. Back in 2005, Leachman Cattle started working with the BIO group out of Canada. The goal was to come up with one number that sorted the bulls on their bottom line impact. Since 2005, Leachman's have calculated and selected for \$Profit. Through test herds, cooperator herds, and feedlot performance data -- \$Profit has been proven to work. The same technology used to calculate \$Profit is now being used by Verified Beef to estimate the value of feeder calves. Verified Beef will certify the Relative Market Value of your calves through their Reputation Feeder Calf program. This program uses \$Profit to predict the value of the calves in the feedlot and on the rail. This will allow you to earn premiums on genetically superior calves.

## How \$Profit works:

\$Profit assumes that the average commercial bull will have 100 progeny over its lifetime. Let's compare a \$10,000 \$Profit bull to \$6,000 \$Profit bull (the average 2008 born Angus bull). The predicted difference between the bulls is \$4,000 or about \$40 per calf. The model assumes that you keep 30% of your heifers and that you retain ownership on the remainder and sell the finished animals on a grid. We realize that many don't retain ownership, but with the Reputation Feeder Calf program, you can get paid and sell at weaning. Feedlots have already proven their willingness to pay premiums for superior \$Profit calves.

## What traits are included in \$Profit:

\$Profit includes nearly every trait that impacts profitability. The effect of most traits on profit is fairly simple to understand. Here is the list of what is included:

### Revenue Traits

- Calving ease = more calves
- Weaning & yearling EPD = more weight
- Fertility (days to conception) = more weight & more calves
- Carcass weight = worth more up to 1050 lbs.
- Marbling = valued based on the grid premiums
- Ribeye area = value as impacts yield grade
- % Retail Product = more yield

### Cost Traits

- Cow mature size = bigger eats more
- Cow intake = more intake costs more
- Feedlot feed efficiency = cost of gain

Some traits are not so easily characterized as more is better for \$Profit. Milk, for example, is a good thing until you get too much. In the \$Profit model, each pound of milk EPD over +25 has a more negative effect on fertility than it has a positive effect on weaning weight. There are a few traits not yet included in \$Profit: longevity, structure, and disposition. These traits are important but difficult to express in dollars.

Index selection has been proven to work in chickens, pigs, and dairy cows. There is little doubt that it can accelerate the rate of genetic improvement in beef cattle as well. That is why we have decided to provide \$Profit to our bull customers.

The technical team at BIO consists of Dr. Steve Miller, Dr. Peter Sullivan, and independent consultant, Brian Pogue. Dr. Miller helped design the \$Profit simulation model. Dr. Peter Sullivan calculates all of the underlying EPD's for the Leachman program. Each month, Dr. Sullivan analyzes the database and updates our \$Profit predictions. Brian Pogue works to ensure data integrity and model accuracy. This great team excels at generating the \$Profit index exclusively for Leachman Cattle of Colorado.

Bio is a company with a mandate for genetic improvement. Their science is leading edge in a number of different areas. BIO has estimated Across Breed Comparison EPD's on commercial and seedstock cattle in Canada since 1988. Economic simulation models have been used to generate indexes since 1996. BIO works in conjunction with the Centre for Genetic Improvement of Livestock (CGIL) at the University of Guelph in the development of new technologies for beef cattle improvement. For further information on BIO or CGIL visit their websites: [www.biobeef.com](http://www.biobeef.com) and [www.CGIL.uoguelph.ca](http://www.CGIL.uoguelph.ca)

## ROCKING R RED ANGUS • RED ANGUS BULLS

<b>ProS</b>	ProS Index - combines HB Index and GM Index into one Index
<b>HB</b>	Herdbuilder Index – ranks bulls on the cow herd building traits
<b>GM</b>	Gridmaster Index – ranks bulls on the feedlot and carcass traits
<b>CED</b>	Calving Ease Direct-percent difference of calves unassisted at birth
<b>BW</b>	Birth Weight
<b>WW</b>	Weaning Weight
<b>YW</b>	Yearling Weight
<b>ADG</b>	Average Daily Gain
<b>DMI</b>	Dry Matter Intake
<b>MILK</b>	Milk
<b>ME</b>	Mature Cow Maintenance Energy Requirements
<b>HPG</b>	Heifer Pregnancy-percent difference daughters conceiving
<b>CEM</b>	Calving Ease Total Maternal-percent of difference of daughters calving unassisted
<b>STAY</b>	Stayability-percent difference of daughters staying in a herd until six years of age.
<b>MARB</b>	Marbling
<b>YG</b>	Yield Grade - predicts differences in USDA Yield Grade score and is expressed in USDA Yield Grade units.
<b>CW</b>	Carcass Weight - predicts differences in hot carcass weight and is expressed in pounds.
<b>REA</b>	Rib Eye Area
<b>FAT</b>	12th rib fat thickness
<b>F:G</b>	Feed to Gain - Lower number is better
<b>INTAKE</b>	Feed Intake - Lower number is better

### **\$PROFIT - \$RANCH - \$FEEDER**

The higher the number the better for each index. The % breed rank for each index is listed to the right of the of the index.
